INDEX TO AUTHORS

A

Abbott, Lynn D., Jr., and **Dodson, Mary J.** Inhibition of heme synthesis by methyl-substituted benzimidazoles *in vitro*, 845

Abraham, S., Hirsch, P. F., and **Chaikoff, I. L.** The quantitative significance of glycolysis and non-glycolysis in glucose utilization by rat mammary gland, 31

Agranoff, Bernard W., Brady, Roscoe O., and **Colodzin, Martin.** Differential conversion of specifically labeled glucose to $C^{14}O_2$, 773

Allen, Frank Worthington. See *Crestfield and Allen*, 363

Altman, Kurt I. See *Richmond, Altman, and Salomon*, 981

Anderson, Roberta A. See *Hamilton and Anderson*, 95

Anfinsen, Christian B. See *Flavin and Anfinsen*, 375

—. See *Vaughan and Anfinsen*, 367

B

Baker, Lillian E. The kinetics of the action of pepsin on synthetic substrates, 701

Baker, Nome, Shreeve, Walton W., Shipley, Reginald A., Incefy, Genevieve E., and **Miller, Max.** C^{14} studies in carbohydrate metabolism. I. The oxidation of glucose in normal human subjects, 575

Bashford, Margaret. See *Rafelson, Ehrensvärd, Bashford, Saluste, and Hedén*, 725

Beiler, J. M., and **Martin, Gustav J.** Inhibition of 5-hydroxytryptophan decarboxylase, 39

Bergeim, Olaf. See *Johnson, Kempf, and Bergeim*, 757

Bergmann, Felix, and **Dikstein, Shabtay.** Studies on uric acid and related compounds. I. Quantitative determination of uric acid in biological fluids, 149

Bishop, Charles. See *Buzard, Bishop, and Talbott*, 559

Bloch, Konrad, Clark, L. C., and **Harary, Isaac.** Utilization of branched chain acids in cholesterol synthesis, 687

Bokman, Ann H. See *Miyake, Bokman, and Schweigert*, 391

Bovarnick, Marianna R. See *Rosenberg and Bovarnick*, 763

Bowen, William J., and **Kerwin, Timothy D.** A study of the effects of ethylenediaminetetraacetic acid on myosin adenosinetriphosphatase, 237

Brady, Roscoe O., and **Stadtman, E. R.** Enzymatic thioltransacetylation, 621

—. See *Agranoff, Brady, and Colodzin*, 773

Bublitz, Clark, and **Kennedy, Eugene P.** A note on the asymmetrical metabolism of glycerol, 963

— and —. Synthesis of phosphatides in isolated mitochondria. III. The enzymatic phosphorylation of glycerol, 951

Budenstein, Zelda. See *Koshland, Budenstein, and Kowalsky*, 279

Burnett, George, and **Kennedy, Eugene P.** The enzymatic phosphorylation of proteins, 969

Burton, Robert Main, and **Kaplan, Nathan O.** A chemical reaction of hydroxylamine with diphosphopyridine nucleotide, 447

Buzard, James A., Bishop, Charles, and **Talbott, John H.** The conversion of uric acid to allantoin in the normal and gouty human, 559

C

Camien, Merrill N., and **Dunn, Max S.** The D-α-hydroxy fatty acid nutrition of *Lactobacillus casei* 280-16, 593

Cerecedo, Leopold R. See *Rodriguez, Hochstrasser, Malbica, and Cerecedo*, 483

XUM

INDEX TO SUBJECTS

A

Acetate: Carbon 14-labeled, utilization, tryptophan synthesis, *Aerobacter aerogenes, Rafelson, Ehrensvärd, Bashford, Saluste, and Hedén,* 725

Metabolism, diaphragm, *Foster and Villee,* 797

Methyl-labeled, utilization, sphingosine biosynthesis, *Zabin and Mead,* 87

Phosphorylation, enzyme, *Rose, Grunberg-Manago, Korey, and Ochoa,* 737

Acetic acid: Ethylenediaminetetra-. *See* Ethylenediaminetetraacetic acid

Acetolactate: α-, synthesis, bacterial, *Kobayashi and Kalnitsky,* 473

Acetylaminofluorene: 2-, liver effect, *Gutmann and Peters,* 63

Acetylation: Thioltrans-. *See* Thioltransacetylation

Acid(s): Branched chain, utilization, cholesterol synthesis, *Bloch, Clark, and Harary,* 687

Acylase: Glycine *N*-. *See* Glycine *N*-acylase

Adenosinetriphosphatase: Myosin, ethylenediaminetetraacetic acid effect, *Bowen and Kerwin,* 237

Adenosinetriphosphate: Hydrolysis, muscle protein-catalyzed, mechanism, *Koshland, Budenstein, and Kowalsky,* 279

Adrenal(s): Coenzyme A, *Malmström and Glick,* 677

Perfusion, 17α-hydroxyprogesterone effect, *Levy, Jeanloz, Jacobsen, Hechter, Schenker, and Pincus,* 867

—, pregn-5-en-3β-ol-20-one effect, *Levy, Jeanloz, Jacobsen, Hechter, Schenker, and Pincus,* 867

—, progesterone effect, *Levy, Jeanloz, Jacobsen, Hechter, Schenker, and Pincus,* 867

—, steroid transformations, chemical, *Levy, Jeanloz, Jacobsen, Hechter, Schenker, and Pincus,* 867

Adrenal(s)—*continued:*

Progesterone conversion to 17-hydroxy-11-deoxycorticosterone, effect, *Plager and Samuels,* 21

Aerobacter aerogenes: Tryptophan synthesis, acetate-1-C^{14} utilization, *Rafelson, Ehrensvärd, Bashford, Saluste, and Hedén,* 725

Albumin: Ov-. *See* Ovalbumin

Alcohol dehydrogenase: Liver, diphosphopyridine nucleotide-hydroxylamine complex, relation, *Kaplan and Ciotti,* 431

—, hydroxylamine and cyanide, effect, *Kaplan, Ciotti, and Stolzenbach,* 419

Aldehyde(s): Fatty, long chain, bacterial luciferin-luciferase reaction, relation, *Strehler and Cormier,* 213

Aldolase: Phosphoketotetrose. *See* Phosphoketotetrose aldolase

Allantoin: Uric acid conversion to, gout, *Buzard, Bishop, and Talbott,* 559

Amino acid(s): Determination, chromatographic, *Moore and Stein,* 893

—, photometric, ninhydrin reagent, modified, *Moore and Stein,* 907

Free, blood plasma, *Stein and Moore,* 915

—, cat tissues, *Tallan, Moore, and Stein,* 927

—, chick chorio-allantoic membranes, virus infection influence, *Johnson, Kempf, and Bergeim,* 757

-Related compounds, cat tissues, *Tallan, Moore, and Stein,* 927

— —, determination, photometric, ninhydrin reagent, modified, *Moore and Stein,* 907

Requirements, *Rose, Lambert, and Coon,* 815

Ribonuclease, *Hirs, Stein, and Moore,* 941

Amphibia: Development, carbon dioxide, carbon 14-labeled, metabolism, *Cohen,* 337

XUM

Anthranilic acid: 3-Hydroxy-. *See* Hydroxyanthranilic acid
Anticoagulant(s): Lipide, determination, *Mushett, Goldsmith, and Kelley,* 163
—, isolation, *Goldsmith and Mushett,* 169
Apyrase: Bacteria, inorganic ions, effect, *Clark and MacLeod,* 541
Ascites: Carcinoma cell, Ehrlich, glycine-1-C^{14}, influx, *Heinz,* 781
Aspartic acid: Purine biosynthesis, rôle, *Wahba and Shive,* 155
Azotobacter: Respiration, ion effect, *Goucher and Kocholaty,* 613

B

Bacillus: *See also Lactobacillus*
Bacillus subtilis: Glutamic acid, *Keynan, Strecker, and Waelsch,* 883
Glutamine, *Keynan, Strecker, and Waelsch,* 883
Glycolysis, *Keynan, Strecker, and Waelsch,* 883
Bacteria: α-Acetolactate synthesis, *Kobayashi and Kalnitsky,* 473
Apyrase, inorganic ions, effect, *Clark and MacLeod,* 541
Butylene glycol dehydrogenase, *Strecker and Harary,* 263
Diacetyl reductase, *Strecker and Harary,* 263
Luciferin-luciferase reaction, fatty aldehydes, long chain, relation, *Strehler and Cormier,* 213
Photosynthetic, cytochromes, enzyme effect, *Kamen and Vernon,* 663
—, hematin compounds, *Vernon and Kamen,* 643
See also Aerobacter, Azotobacter, Leuconostoc, Treponeme
Benzimidazole(s): Methyl-substituted, heme synthesis, effect, *Abbott and Dodson,* 845
Biological fluid(s): Uric acid determination, *Bergmann and Dikstein,* 149
Blood plasma: Amino acids, free, *Stein and Moore,* 915
Lipide, embryo, chicken, *Schjeide,* 355
Nitrogen, embryo, chicken, *Schjeide,* 355
Blood serum: Proteins, semen plasma and milk serum proteins, comparison, *Larson, Gray, and Salisbury,* 43
Bone marrow: Hemin biosynthesis, *Richmond, Altman, and Salomon,* 981
Butylene glycol dehydrogenase: Bacteria, *Strecker and Harary,* 263

C

Carbohydrate: Metabolism, carbon 14-labeled, *Baker, Shreeve, Shipley, Incefy, and Miller,* 575
Carbon: 14-labeled, carbohydrate metabolism, *Baker, Shreeve, Shipley, Incefy, and Miller,* 575
Carbon dioxide: Carbon 14-labeled, glucose, labeled, conversion to, *Agranoff, Brady, and Colodzin,* 773
— —, metabolism, amphibian development, *Cohen,* 337
Treponeme, saprophyte, growth effect, *Steinman, Oyama, and Schulze,* 327
